DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13, drawn to a method for managing cooperative position among wireless transmit/receive unit in a wireless communication system, classified in class 455, subclass 404.2.
 - II. Claims 14-16, drawn to a wireless transmit/receive unit, classified in class 455, subclass 456.1.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because a wireless communication system manages cooperative position among wireless transmit/receive unit. The subcombination has separate utility such as a wireless transmit/receive unit stores the number of instance where positioning information is provided to the system.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
